## EDUCATION

|                                                                                                |                                   |
|------------------------------------------------------------------------------------------------|-----------------------------------|
| <b>Saraswati College of Engineering</b><br><i>B.E. in Computer Engineering (Expected 2027)</i> | Navi Mumbai, India<br>2023 – 2027 |
| <b>Ambuja Vidya Niketan</b><br><i>Class XII — CBSE (CS: 89/100)</i>                            | Chandrapur, India<br>2023         |
| <b>Manikgarh Cement English School</b><br><i>Class X — CBSE (IT: 91/100, Overall: 81.8%)</i>   | Chandrapur, India<br>2021         |

## TECHNICAL SKILLS

**Languages:** Python, SQL (MySQL), Java, TypeScript, JavaScript, HTML, CSS  
**Libraries & Frameworks:** Pandas, Matplotlib, Seaborn, React, Tailwind CSS, Zustand, Framer Motion, GSAP  
**Tools:** Git, GitHub, VS Code, MySQL Workbench, Vite  
**Concepts:** Data Analysis, Data Visualization, CRUD Applications, DSA, Agile Methodologies

## SELECTED PROJECTS

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |                                                                             |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------|
| <b>Student Utility Hub</b><br><i>Astro, React, TypeScript, Tailwind CSS, Cloudflare Pages</i> <ul style="list-style-type: none"><li>Developed a production-ready student utility platform featuring attendance trackers, credit-weighted SGPA/CGPA simulators, passing estimators, and Mumbai University ATKT promotion checks.</li><li>Integrated SEO optimization, structured JSON-LD data, sitemaps, Open Graph metadata, and Progressive Web App (PWA) configurations with offline service worker caching.</li></ul>                                                                                                                                                                                                                     | <a href="#">GitHub</a>   <a href="#">Live</a><br><i>Front-End &amp; PWA</i> |
| <b>SONIVIO Music Streaming Platform</b><br><i>Astro, React, TypeScript, Tailwind CSS, Zustand, YouTube Data API v3</i> <ul style="list-style-type: none"><li>Engineered a premium music streaming platform utilizing Astro Islands architecture (partial hydration) and Astro View Transitions to support continuous audio playback during navigation.</li><li>Designed a secure serverless API proxy on Cloudflare Pages to handle YouTube Data API v3 queries without exposing sensitive Google Cloud developer credentials to client browsers.</li><li>Implemented an optimized state management system using decoupled Zustand slices (player, queue, library) and integrated virtual list scrolling for 60FPS list rendering.</li></ul> | <a href="#">GitHub</a>   <a href="#">Live</a><br><i>Full-Stack Web Dev</i>  |
| <b>Student Result Analyzer</b><br><i>Python, Pandas, Matplotlib, Seaborn</i> <ul style="list-style-type: none"><li>Engineered a data analysis pipeline using Pandas to process multi-subject academic records and automatically track grade distributions, pass/fail ratios, and class statistics.</li><li>Integrated Matplotlib and Seaborn to generate and export publication-ready data visualizations (4 PNG reports) to communicate student metrics clearly.</li><li>Designed a clean, modular CLI script separation separating dataset generation and analytical report compilation.</li></ul>                                                                                                                                         | <a href="#">GitHub</a><br><i>Data Analysis</i>                              |
| <b>Expense Tracker with SQL</b><br><i>Python, MySQL, Tabulate, Dotenv</i> <ul style="list-style-type: none"><li>Developed a CLI financial manager featuring full CRUD transaction logging, paginated terminal outputs using Tabulate, and interactive category and date filters.</li><li>Integrated a monthly budget warning system and structured MySQL queries (relational table JOINS) to construct real-time category breakdown summaries, with automated timestamped CSV exporting.</li></ul>                                                                                                                                                                                                                                           | <a href="#">GitHub</a><br><i>Backend &amp; Database</i>                     |
